ABOUT THE PRESENTATION

Charles Gaines' solo booth at Frieze London will debut the newest works from his acclaimed Shadows series, which began in 1978. This marks the first time he revisits this subject in over four decades. Shown alongside his complete set of 'Shadows X' from 1980, this new body of work continues Gaines' long interest in engaging with formulas and systems that interrogate relationships between the objective and subjective realms.

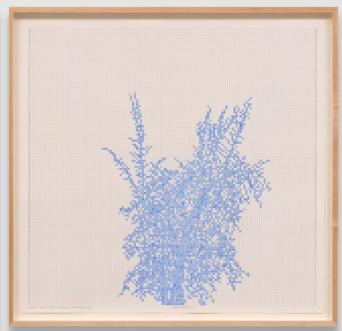

The new works are comprised of sub-series that depict different species of plants commonly found throughout California, including Jade, Dragon, Aloe, Ferox and Yucca plants. Each sub-series is made up of four 'sets,' which consists of a photograph of the plant together with its shadow, alongside a densely rendered black ink drawing and a watercolor. Over each sub-series, Gaines rotates and sequentially plots the forms of the plant and its shadow on a numbered grid in both mediums. To complete the series, Gaines turns each plant 90 degrees and documents it through the same process, so that each plant is shown rotated 0, 90, 180, and 270 degrees. As each set progresses, the ink drawings and watercolors depict a combination of all the prior rotations of the plant and its shadow, resulting in a complex, layered map of the complete subject collapsed into a final image.
